

Acme Corp Security Incident Response Standard

Purpose

This standard defines the process Acme Corp follows when responding to security incidents, including detection, containment, eradication, recovery, and post-incident review.

Severity Levels

Incidents are classified as Severity 1 through Severity 4. Severity 1 incidents involve active data exfiltration or full system compromise and require immediate response within 15 minutes. Severity 4 incidents are low-impact and may be addressed within 5 business days.

Roles and Responsibilities

The Incident Commander coordinates the overall response and has authority to make containment decisions. The Communications Lead handles internal and external messaging. The Forensics Lead preserves evidence and determines root cause.

Containment

Initial containment actions may include isolating affected hosts from the network, disabling compromised credentials, and revoking active sessions. All containment actions must be logged in the incident ticket with a timestamp.

Post-Incident Review

Within five business days of incident closure, the Incident Commander must schedule a blameless post-incident review and publish a written report covering timeline, root cause, and corrective actions.
